

## ARG21162 anti-CD8a antibody [CT-8] (PE)

Package: 50 µg  
Store at: 4°C

### Summary

|                     |   |
|---------------------|---|
| Product Description | PE-conjugated Mouse Monoclonal antibody [CT-8] recognizes CD8a  |
| Tested Reactivity   | Chk, Turkey   |
| Tested Application  | BL, FACS, ICC/IF, IHC-Fr, IHC-P   |
| Specificity         | Chicken/Turkey/Guinea Fowl CD8α. The clone CT-8 recognizes the CD8α chain and has been shown to react to a polymorphic determinant in turkey. |
| Host                | Mouse   |
| Clonality           | Monoclonal  |
| Clone               | CT-8  |
| Isotype             | IgG1, kappa   |
| Target Name         | CD8a  |
| Species             | Chicken   |
| Immunogen           | Chicken thymocytes and Ig-negative blood leukocytes   |
| Conjugation         | PE  |
| Alternate Names     | T-cell surface glycoprotein CD8 alpha chain; Leu2; p32; T-lymphocyte differentiation antigen T8/Leu-2; CD8; MAL; CD antigen CD8a              |

### Application Instructions

| Application table | Application | Dilution                       |
|-------------------|-------------|--------------------------------|
|                   | BL          | Assay-dependent                |
|                   | FACS        | < 0.2 µg/10 <sup>6</sup> cells |
|                   | ICC/IF      | Assay-dependent                |
|                   | IHC-Fr      | Assay-dependent                |
|                   | IHC-P       | Assay-dependent                |

Application Note \* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.

### Properties

|              |                                     |
|--------------|-------------------------------------|
| Form         | Liquid                              |
| Buffer       | PBS, 0.1% Sodium azide and Sucrose. |
| Preservative | 0.1% Sodium azide                   |
| Stabilizer   | Sucrose                             |

|                     |  |
|---------------------|--|
| Concentration       | 0.1 mg/ml  |
| Storage instruction | Aliquot and store in the dark at 2-8°C. Keep protected from prolonged exposure to light. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed before use. |
| Note                | For laboratory research only, not for drug, diagnostic or other use.   |

## Bioinformation

|                |   |
|----------------|---|
| Gene Symbol    | CD8A  |
| Gene Full Name | CD8a molecule   |
| Background     | CD8 antigen is a cell surface glycoprotein found on most cytotoxic T lymphocytes that mediates efficient cell-cell interactions within the immune system. The CD8 antigen acts as a coreceptor with the T-cell receptor on the T lymphocyte to recognize antigens displayed by an antigen presenting cell in the context of class I MHC molecules. The coreceptor functions as either a homodimer composed of two alpha chains or as a heterodimer composed of one alpha and one beta chain. Both alpha and beta chains share significant homology to immunoglobulin variable light chains. This gene encodes the CD8 alpha chain. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Nov 2011]   |
| Function       | CD8 is an integral membrane glycoprotein that plays an essential role in the immune response and serves multiple functions in responses against both external and internal offenses. In T-cells, functions primarily as a coreceptor for MHC class I molecule:peptide complex. The antigens presented by class I peptides are derived from cytosolic proteins while class II derived from extracellular proteins. Interacts simultaneously with the T-cell receptor (TCR) and the MHC class I proteins presented by antigen presenting cells (APCs). In turn, recruits the Src kinase LCK to the vicinity of the TCR-CD3 complex. LCK then initiates different intracellular signaling pathways by phosphorylating various substrates ultimately leading to lymphokine production, motility, adhesion and activation of cytotoxic T-lymphocytes (CTLs). This mechanism enables CTLs to recognize and eliminate infected cells and tumor cells. In NK-cells, the presence of CD8A homodimers at the cell surface provides a survival mechanism allowing conjugation and lysis of multiple target cells. CD8A homodimer molecules also promote the survival and differentiation of activated lymphocytes into memory CD8 T-cells. [UniProt] |
