# ARG21405 anti-CD79b antibody [CB3-1] (PE-Cyanine 5)

Package: 50 tests Store at: 4°C

### Summary

Product Description PE-Cyanine 5-conjugated Mouse Monoclonal antibody [CB3-1] recognizes CD79b

Tested Reactivity Hu

Tested Application FACS, WB

Specificity Human CD79b. The clone CB3-1 reacts with the  $\beta$  chain of CD79.

Host Mouse

Clonality Monoclonal

Clone CB3-1

Isotype IgG1, kappa

Target Name CD79b

Species Human

Immunogen Ramos B cells

Conjugation PE-Cyanine 5

Alternate Names B29; B-cell-specific glycoprotein B29; Ig-beta; B-cell antigen receptor complex-associated protein beta

chain; Immunoglobulin-associated B29 protein; AGM6; IGB; CD antigen CD79b

#### **Application Instructions**

Application table	Application	Dilution
	FACS	10 μl/10^6 cells
	WB	Assay-dependent
• •	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	

#### **Properties**

Form Liquid

Buffer PBS, 0.1% Sodium azide and Sucrose.

Preservative 0.1% Sodium azide

Stabilizer Sucrose

Storage instruction Aliquot and store in the dark at 2-8°C. Keep protected from prolonged exposure to light. Avoid

repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be

gently mixed before use.

Note For laboratory research only, not for drug, diagnostic or other use.

#### Bioinformation

Database links GenelD: 974 Human

Swiss-port # P40259 Human

Gene Symbol CD79B

Gene Full Name CD79b molecule, immunoglobulin-associated beta

Background The B lymphocyte antigen receptor is a multimeric complex that includes the antigen-specific

component, surface immunoglobulin (Ig). Surface Ig non-covalently associates with two other proteins, Ig-alpha and Ig-beta, which are necessary for expression and function of the B-cell antigen receptor. This gene encodes the Ig-beta protein of the B-cell antigen component. Alternatively spliced transcript

variants encoding different isoforms have been described. [provided by RefSeq, Jul 2008]

Function Required in cooperation with CD79A for initiation of the signal transduction cascade activated by the B-

cell antigen receptor complex (BCR) which leads to internalization of the complex, trafficking to late endosomes and antigen presentation. Enhances phosphorylation of CD79A, possibly by recruiting kinases which phosphorylate CD79A or by recruiting proteins which bind to CD79A and protect it from

dephosphorylation. [UniProt]

Calculated Mw 26 kDa

PTM Phosphorylated on tyrosine upon B-cell activation by SRC-type Tyr-kinases such as BLK, LYN and SYK.
