Bioinformation

Gene Symbol	PCDH15
Gene Full Name	protocadherin-related 15
Background	This gene is a member of the cadherin superfamily. Family members encode integral membrane proteins that mediate calcium-dependent cell-cell adhesion. It plays an essential role in maintenance of normal retinal and cochlear function. Mutations in this gene result in hearing loss and Usher Syndrome Type IF (USH1F). Extensive alternative splicing resulting in multiple isoforms has been observed in the mouse ortholog. Similar alternatively spliced transcripts are inferred to occur in human, and additional variants are likely to occur. [provided by RefSeq, Dec 2008]
Function	Calcium-dependent cell-adhesion protein. Essential for maintenance of normal retinal and cochlear function. [UniProt]
Calculated Mw	216 kDa
Cellular Localization	Cell membrane; Single-pass type I membrane protein. Note=Efficient localization to the plasma membrane requires the presence of LHFPL5. Isoform 3: Secreted. [UniProt]

Immunohistochemistry: Paraffin-embedded Human skeletal muscle tissue. Antigen Retrieval: Heat mediation was performed in Citrate buffer (pH 6.0) for 20 min. The tissue section was blocked with 10% goat serum. The tissue section was then stained with ARG43089 anti-PCDH15 antibody at 1 µg/ml dilution, overnight at 4°C.

Flow Cytometry: U-87MG cells were blocked with 10% normal goat serum and then stained with ARG43089 anti-PCDH15 antibody (blue) at 1 µg/10⁶ cells for 30 min at 20°C, followed by incubation with DyLight®488 labelled secondary antibody. Isotype control antibody (green) was rabbit IgG (1 µg/10⁶ cells) used under the same conditions. Unlabelled sample (red) was also used as a control.
