ARG43617 anti-E2F6 antibody

Package: 50 μg Store at: -20°C

Summary

Host

Product Description Rabbit Polyclonal antibody recognizes E2F6

Rabbit

Tested Reactivity Hu

Predict Reactivity Ms, Rat
Tested Application WB

Clonality Polyclonal

Isotype IgG
Target Name E2F6

Species Human

Immunogen Synthetic peptide corresponding to Human E2F6

Conjugation Un-conjugated

Alternate Names E2F-6; Transcription factor E2F6

Application Instructions

Application table	Application	Dilution
	WB	1:500 - 1:2500
Application Note	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	
Observed Size	~32 - 38 kDa	

Properties

Form Liquid

Purification Affinity purification with immunogen.

Buffer 0.9% NaCl, 0.2% Na2HPO4, 0.05% Thimerosal, 0.05% Sodium azide and 5% BSA.

Preservative 0.05% Thimerosal and 0.05% Sodium azide

Stabilizer 5% BSA

Concentration 0.5 mg/ml

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed before use.

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Gene Symbol E2F6

Gene Full Name E2F transcription factor 6

Background This gene encodes a member of a family of transcription factors that play a crucial role in the control of

the cell cycle. The protein encoded by this gene lacks the transactivation and tumor suppressor protein association domains found in other family members, and contains a modular suppression domain that functions in the inhibition of transcription. It interacts in a complex with chromatin modifying factors. There are pseudogenes for this gene on chromosomes 22 and X. Alternative splicing results in multiple

transcript variants. [provided by RefSeq, May 2013]

Function Inhibitor of E2F-dependent transcription. Binds DNA cooperatively with DP proteins through the E2

recognition site, 5'-TTTC[CG]CGC-3'. Has a preference for the 5'-TTTCCCGC-3' E2F recognition site. E2F6 lacks the transcriptional activation and pocket protein binding domains. Appears to regulate a subset of E2F-dependent genes whose products are required for entry into the cell cycle but not for normal cell cycle progression. May silence expression via the recruitment of a chromatin remodeling complex containing histone H3-K9 methyltransferase activity. Overexpression delays the exit of cells from the S-

phase. [UniProt]

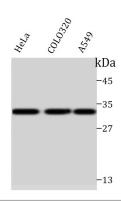

Research Area Gene Regulation antibody

Calculated Mw 32 kDa

PTM Isopeptide bond; Ubl conjugation [UniProt]
