

# ARG53790 anti-CD20 antibody [LT20] (APC)

Package: 100 tests Store at: 4°C

# Summary

| Product DescriptionAPC-conjugated Mouse Monoclonal antibody [LT20] recognizes CD20Tested ReactivityHuTested ApplicationFACSSpecificityThe clone LT20 reacts with CD20 (Bp35), a 33-37 kDa non-glycosylated membrane receptor with four<br>transmembrane domains, expressed on B lymphocytes (it is lost on plasma cells), follicular dendritic<br>cells, and at low levels on peripheral blood T lymphocytes.HostMouseClonalityMonoclonalCloneLT20IsotypeIgG2aTarget NameCD20SpeciesHumanImmunogenNormal human lymphocytes from lymph node.ConjugationAPCAlternate NamesBp35; LEU-16; B-lymphocyte surface antigen B1; B-lymphocyte antigen CD20; CD20; S7; CD antigen<br>CD20; Leukocyte surface antigen B1; CVID5; Membrane-spanning 4-domains subfamily A<br>member 1; MS4A2 |                     |  |

### **Application Instructions**

| Application table | Application  | Dilution   |
|-------------------|--|--|
|                   | FACS   | 10 μl / 10^6 cells   |
| Application Note  | * The dilutions indicate recomm<br>should be determined by the sci | ended starting dilutions and the optimal dilutions or concentrations entist. |

## Properties

| Form                | Liquid  |
|---------------------|---|
| Purification Note   | The purified antibody is conjugated with cross-linked Allophycocyanin (APC) under optimum conditions.<br>The conjugate is purified by size-exclusion chromatography and adjusted for direct use. No<br>reconstitution is necessary. |
| Buffer              | PBS, 15 mM Sodium azide and 0.2% (w/v) high-grade protease free BSA   |
| Preservative        | 15 mM Sodium azide  |
| Stabilizer          | 0.2% (w/v) high-grade protease free BSA   |
| Storage instruction | Aliquot and store in the dark at 2-8°C. Keep protected from prolonged exposure to light. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be                                 |

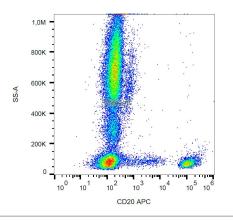

gently mixed before use.

### Bioinformation

Note

| Database links | GenelD: 931 Human  |
|----------------|--|
|                | Swiss-port # P11836 Human  |
| Gene Symbol    | MS4A1  |
| Gene Full Name | membrane-spanning 4-domains, subfamily A, member 1   |
| Background     | CD20 is a member of the membrane-spanning 4A gene family. Members of this nascent protein family are characterized by common structural features and similar intron/exon splice boundaries and display unique expression patterns among hematopoietic cells and nonlymphoid tissues. This gene encodes a B-lymphocyte surface molecule which plays a role in the development and differentiation of B-cells into plasma cells. This family member is localized to 11q12, among a cluster of family members. Alternative splicing of this gene results in two transcript variants which encode the same protein. [provided by RefSeq, Jul 2008] |
| Function       | CD20 is a B-lymphocyte-specific membrane protein. It plays a role in the regulation of cellular calcium<br>influx necessary for the development, differentiation, and activation of B-lymphocytes<br>(PubMed:3925015, PubMed:7684739, PubMed:12920111). Functions as a store-operated calcium<br>(SOC) channel component promoting calcium influx after activation by the B-cell receptor/BCR<br>(PubMed:7684739, PubMed:12920111, PubMed:18474602). [UniProt]   |
