Bioinformation

Gene Symbol PLXNA1

Gene Full Name plexin A1

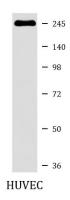

Function Coreceptor for SEMA3A, SEMA3F, and SEMA6D. Necessary for signaling by class 3 semaphorins

and subsequent remodeling of the cytoskeleton. Plays a role in axon guidance, invasive growth and cell migration. Class 3 semaphorins bind to a complex composed of a neuropilin and a plexin. The plexin modulates the affinity of the complex for specific semaphorins, and its cytoplasmic domain is required

for the activation of down-stream signaling events in the cytoplasm (By similarity). [UniProt]

Calculated Mw 211 kDa
