Bioinformation

Database links	GeneID: 10299 Human Swiss-port # O60337 Human
Background	This gene encodes a member of a family of membrane-associated E3 ubiquitin ligases containing RING-CH-type zinc finger motifs. Ubiquitination of type II deiodinase by the encoded protein is an important regulatory step in thyroid hormone signalling. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided by RefSeq, Jul 2012]
Research Area	Cell Biology and Cellular Response antibody
Calculated Mw	103 kDa
PTM	Auto-ubiquitinated, which results in proteasomal degradation.
