

ARG83526

arigoQIK[®] Human MMP9 ELISA Development Kit

Package: 1 kit(5 plates), 1 kit (15 plates) Store at: 4°C, -20°C

Summary Product Description ARG83526 arigoQIK[®] Human MMP9 ELISA Development Kit, includes Capture antibody, Detection antibody, Standard, and HRP-Streptavidin Solution. This ELISA Development Kit is designed for the development of sandwich ELISA to measure Human MMP9 in serum, plasma and cell culture supernatants. For other reagents required for arigoQIK ELISA Development Kit, please refer ARG83524 Integral Reagent Kit (ELISA Development Kit) More about arigoQIK-: • Optimized capture and detection antibody pairs • Reduced incubation time and wash cycles • 2-hour quicker than conventional ELISA process • 5- and 15-plate packages available **Tested Reactivity** Hu **Tested Application** ELISA **Target Name** MMP9 Conjugation HRP **Conjugation Note** Substrate: TMB and read at 450 nm. Sensitivity 7.81 pg/ml Sample Type Serum, plasma and cell culture supernatants. Standard Range 15.63 - 1000pg/ml Sample Volume 50 µl **Alternate Names** MMP9; Matrix Metallopeptidase 9; CLG4B; Matrix Metalloproteinase 9 (Gelatinase B, 92kDa Gelatinase, 92kDa Type IV Collagenase); Matrix Metalloproteinase-9; EC 3.4.24.35; MMP-9; GELB; Matrix Metallopeptidase 9 (Gelatinase B, 92kDa Gelatinase, 92kDa Type IV Collagenase); 92 KDa Type IV Collagenase; Macrophage Gelatinase; Type V Collagenase; 92 KDa Gelatinase; Gelatinase B; EC 3.4.24; MANDP2

Properties

| Storage instruction | Store components at 4°C or -20°C. Do not expose test reagents to heat, sun or strong light during storage and usage. Please refer to the product user manual for detail temperatures of the components. |
|---------------------|---|
| Note | For laboratory research only, not for drug, diagnostic or other use. |

Bioinformation

| Gene Symbol | MMP9 |
|----------------|---|
| Gene Full Name | Matrix Metallopeptidase 9 |
| Background | Proteins of the matrix metalloproteinase (MMP) family are involved in the breakdown of extracellular matrix in normal physiological processes, such as embryonic development, reproduction, and tissue remodeling, as well as in disease processes, such as arthritis and metastasis. Most MMP's are secreted |

| | as inactive proproteins which are activated when cleaved by extracellular proteinases. The enzyme encoded by this gene degrades type IV and V collagens. Studies in rhesus monkeys suggest that the enzyme is involved in IL-8-induced mobilization of hematopoietic progenitor cells from bone marrow, and murine studies suggest a role in tumor-associated tissue remodeling. [provided by RefSeq, Jul 2008] |
|-----------------------|--|
| Function | Degrades fibronectin but not laminin or Pz-peptide. [UniProt] |
