

## ARG83826 Human EGF ELISA Kit

Package: 96 wells  
Store at: 4°C, -20°C

### Summary

Product Description	ARG83826 Human EGF ELISA Kit is an Enzyme Immunoassay kit for the quantification of Human EGF in serum and plasma, cell culture supernatants
Tested Reactivity	Hu
Tested Application	ELISA
Target Name	EGF
Conjugation	HRP
Conjugation Note	Substrate: TMB and read at 450 nm.
Sensitivity	1.95 pg/mL
Sample Type	serum and plasma, cell culture supernatants
Standard Range	3.9 - 250 pg/mL
Sample Volume	50 µl
Alternate Names	Urogastrone; Pro-epidermal growth factor; URG; HOMG4; EGF

### Application Instructions

Assay Time 4 hours

### Properties

Form	96 well
Storage instruction	Store the kit at 4°C, -20°C. Keep microplate wells sealed in a dry bag with desiccants. Do not expose test reagents to heat, sun or strong light during storage and usage. Please refer to the product user manual for detail temperatures of the components.
Note	For laboratory research only, not for drug, diagnostic or other use.

### Bioinformation

Gene Symbol	EGF
Gene Full Name	epidermal growth factor
Background	This gene encodes a member of the epidermal growth factor superfamily. The encoded protein is synthesized as a large precursor molecule that is proteolytically cleaved to generate the 53-amino acid epidermal growth factor peptide. This protein acts a potent mitogenic factor that plays an important role in the growth, proliferation and differentiation of numerous cell types. This protein acts by binding the high affinity cell surface receptor, epidermal growth factor receptor. Defects in this gene are the cause of hypomagnesemia type 4. Dysregulation of this gene has been associated with the growth and progression of certain cancers. Alternate splicing results in multiple transcript variants.[provided by RefSeq, May 2010]
Function	EGF stimulates the growth of various epidermal and epithelial tissues in vivo and in vitro and of some

fibroblasts in cell culture. Magnesiotropic hormone that stimulates magnesium reabsorption in the renal distal convoluted tubule via engagement of EGFR and activation of the magnesium channel TRPM6. Can induce neurite outgrowth in motoneurons of the pond snail *Lymnaea stagnalis* in vitro (PubMed:10964941). [UniProt]

Research Area

Cancer kit; Cell Biology and Cellular Response kit; Signaling Transduction kit

PTM

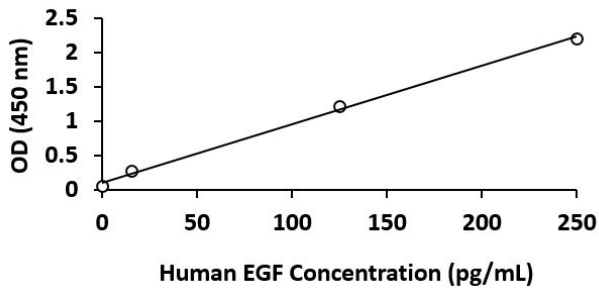

O-glycosylated with core 1-like and core 2-like glycans. It is uncertain if Ser-954 or Thr-955 is O-glycosylated. The modification here shows glycan heterogeneity: HexHexNAc (major) and Hex2HexNAc2 (minor).

Cellular Localization

Membrane. [UniProt]
